

KDIA Re Park [17-01]

Date: 17 Jan 2026

Scope: Customer Portal, Vendor Portal, Admin Portal

Context: Workflow realignment

1. Overview of Today's Changes

Today's work focused on aligning the entire platform with KDIA's managed solar service philosophy, removing earlier assumption-based features, and implementing a controlled, approval-driven operational workflow across all portals.

The system now clearly communicates:

- KDIA manages solar allocations
- Customers have visibility, not control
- Vendors act as a sales partners, not operators
- Admins retain full governance, approvals, and auditability

2. Customer Portal Changes

2.1 Portal Positioning Shift

- Repositioned the Customer Portal from an energy monitoring dashboard to a managed clean energy service portal
- Removed all language implying:
 - Real time monitoring
 - Consumption tracking
 - Optimization or self service controls

2.2 Dashboard Header & Messaging

- Updated hero section to clearly state:

- Solar allocation is managed by KDIA
- Infrastructure operations are handled centrally
- Replace technical system language with reassurance-focused copy
- Introduced a clear “Allocation Active” service status indicator (non-technical)

2.3 Monthly Solar Allocation Section

- Retained allocation summary as read-only
- Clarified:
 - Allocation is monthly
 - Allocation is assigned by KDIA
 - Customers cannot modify allocations directly
- Added lifecycle indicators:
 - Onboarded → Approved → Allocated → Active

2.4 Support Centric Design

- Elevated Support & Help as the primary customer action
- All changes, clarifications and updates route through support tickets
- Reinforced that billing comes from DISCOM and consumption is not tracked by KDIA

3. Vendor Portal Changes

3.1 Vendor Model Clarification

- Vendors are now explicitly modeled as individual sales partners, not companies
- Updated all copy and UI language accordingly

3.2 Vendor Dashboard

- Introduced a structured Sales Dashboard

- Displays:
 - Assigned leads
 - Customers onboarded
 - Draft applications
- All metrics are informational, with no operational control

3.3 Lead Management

- Vendors can:
 - View assigned leads
 - Update lead status (visible to admin)
 - Begin onboarding flows
- Vendors cannot approve customers or assign allocations

3.4 Customer Onboarding by Vendors

- Vendors can create DRAFT customer profiles
- Draft customers are:
 - Invisible to the Customer Portal
 - Visible only to Admin Approvals
- Vendors must explicitly submit customers for admin review

4. Admin Portal Changes

4.1 Admin Dashboard Repositioning

- Renamed and reframed as Service Operations Dashboard
- Focuses on:
 - Customer Approvals
 - Allocation oversight
 - Platform health

- Support workflows

4.2 Customer Approval Workflow

- Introduced explicit customer lifecycle states:
 - DRAFT
 - PENDING
 - APPROVED
 - REJECTED
- Only pending customers appear in Customer Approvals
- Only Approved customers appear in the Customer Directory

4.3 Customer Review & Governance

- Admins can:
 - Review full customer details
 - See onboarding source (sales partner)
 - Approve or reject with reason
- Lifecycle timeline clearly visualized:
 - Onboarded → Approved → Allocated → Active

4.4 Allocation Assignment

- Only Admins can assign solar allocations
- System prevents:
 - Multiple active allocations per customer
 - Allocation before approval
- All allocation actions are logged

5. Vendor Management & Compliance

- Admin Vendor Management allows:

- Review of sales partner applications
- Approval or rejection with reasons
- Vendors must be approved before accessing dashboards

6. Audit & Traceability

- All critical actions now generate audit logs:
 - Customer approvals / rejections
 - Vendor approvals
 - Allocation assignments
 - Support actions
- Provide full traceability for operational and compliance review

7. Key Outcomes Achieved Today

- Removed assumption based features
- Enforced a governed, approval driven lifecycle
- Clearly separated roles (Customers / Vendor / Admin)
- Aligned UI, copy, and workflows with KDIA's business model

8. Current Platform State

- **Customer Portal:** Read-only, trust-focused, support-driven
- **Vendor Portal:** Sales onboarding only, no operational authority
- **Admin Portal:** Full control, approvals, allocations, audit visibility
