

Feature Description & Implementation Overview

As part of the website enhancement for **KDIA Re Park**, a new “**Apply Here / Apply for Solar Subscription**” pop-up module has been designed to streamline the onboarding process for potential clients and improve lead capture efficiency.

Purpose

The objective of this feature is to provide a structured, user-friendly way for interested clients to submit their details and request contact from a KDIA Re Park representative or vendor (salesman). This pop-up serves as the primary entry point for new customer applications.

Feature Overview

- A responsive modal pop-up is triggered via a clear Call-To-Action (CTA) on the website.
- The pop-up contains a multi-step application form to reduce user friction and improve completion rates.
- The form captures essential personal, property, and referral information required for sales follow-up and vendor assignment.

Data Collected

The application form collects the following information:

Basic Information

- Full Name
- Mobile Number
- Email Address

Property Details

- Property Type (Residential / Commercial / Industrial)
- Address
- City

- State
- Pincode

Personal Information

- Date of Birth
- Gender (optional)

Referral & Vendor Assignment

- Option to enter an existing KDIA Re Park vendor name or code (if referred)
- Option to request automatic vendor assignment by KDIA Re Park if no referral is available

Consent

- Explicit user consent to be contacted via call, SMS, or email

Referral Logic

- If the applicant has an existing referral, they can manually enter the vendor's name or code.
- If no referral is available, the system allows KDIA Re Park to assign a vendor internally, ensuring every lead is handled efficiently.

User Experience & Validation

- The form includes proper field validation to ensure data accuracy.
- Required fields must be completed before submission.
- The modal is fully responsive and optimized for both desktop and mobile devices.

Submission & Confirmation

- Upon successful submission, the applicant is shown a confirmation message indicating that their application has been received.
- The message clearly states that a KDIA Re Park representative will contact them soon for further assistance.
- The submission flow does not interrupt the user's browsing experience.

Operational Benefits

- Centralized and structured lead capture
- Improved coordination between clients and vendors
- Reduced manual follow-ups
- Scalable foundation for future CRM, analytics, and automation integrations

Future Enhancements (Planned)

- Automated vendor assignment based on location and availability
- Application tracking and status updates
- Admin dashboard for lead and vendor management
- Email and SMS confirmation notifications
